WHAT IS COLORETT 20 ?

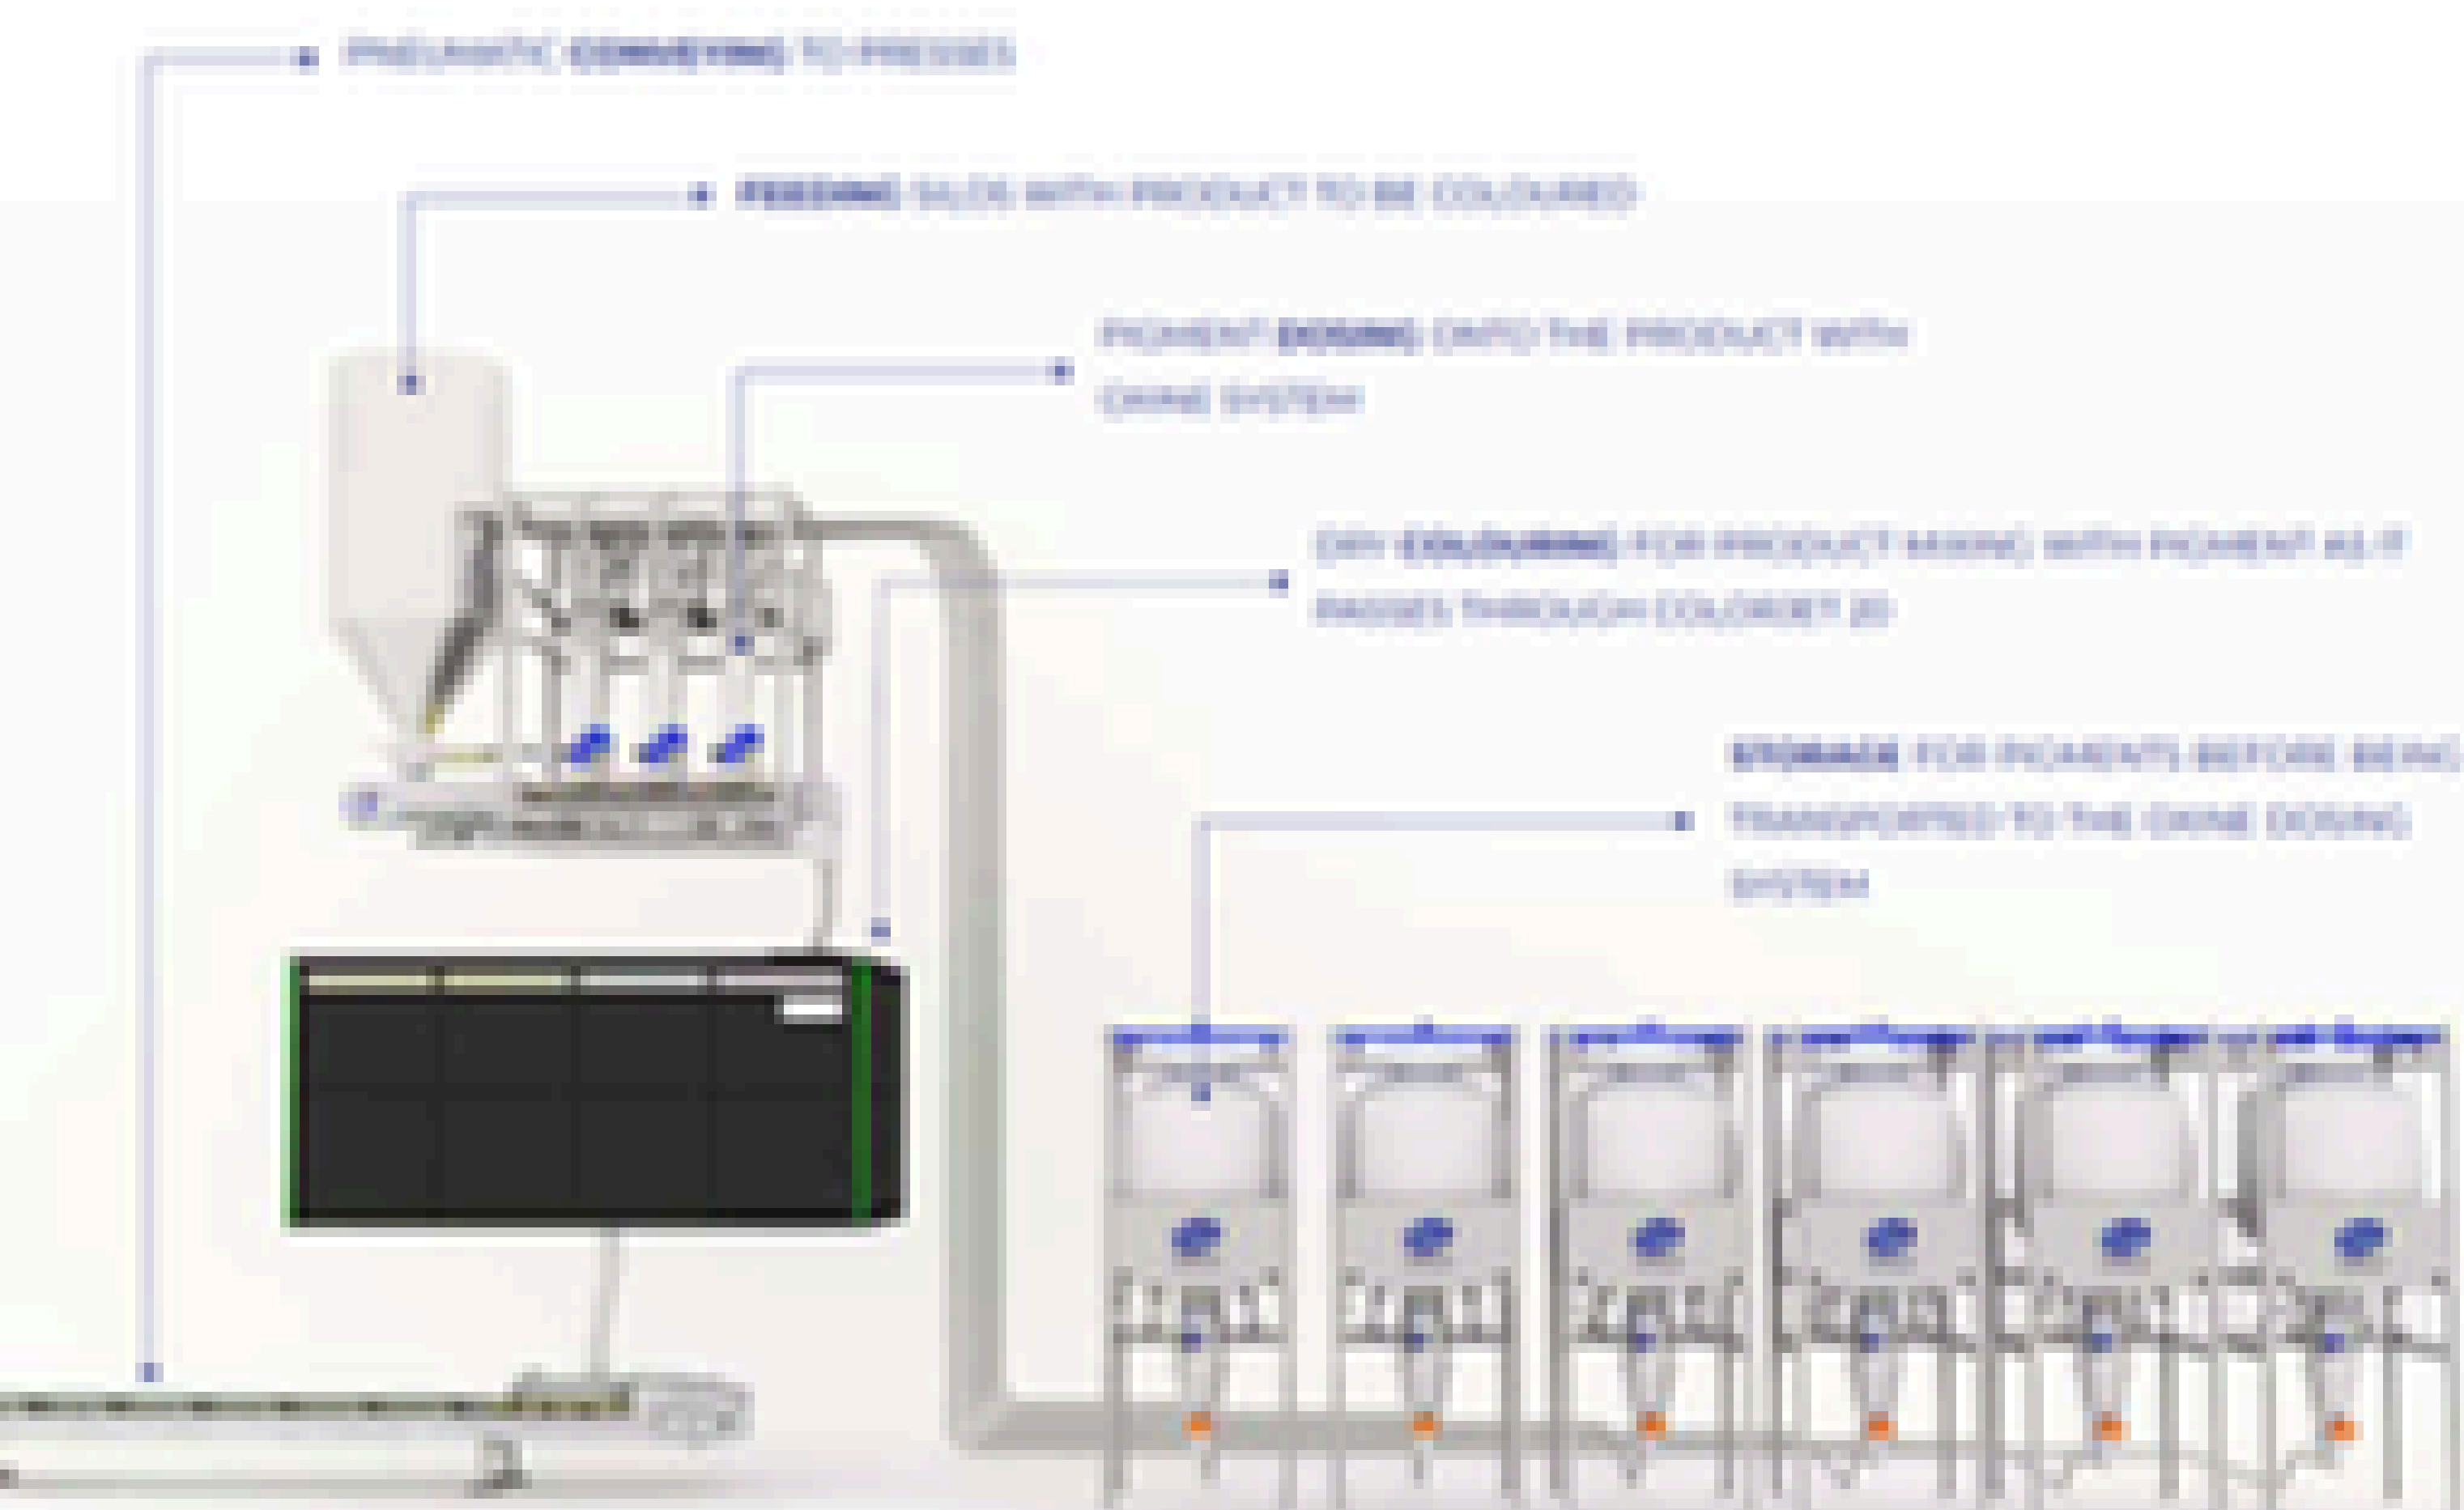

The COLORETT 20 patented system is a high-performance vacuum mixer designed to meet the requirements of mixing and homogenizing dry colouring process.

This equipment represents a milestone in the industry, offering a comprehensive solution for the dry colouring process, ensuring total adhesion of pigments to the powder and improving the quality of the final product.

HOW DOES IT WORK?

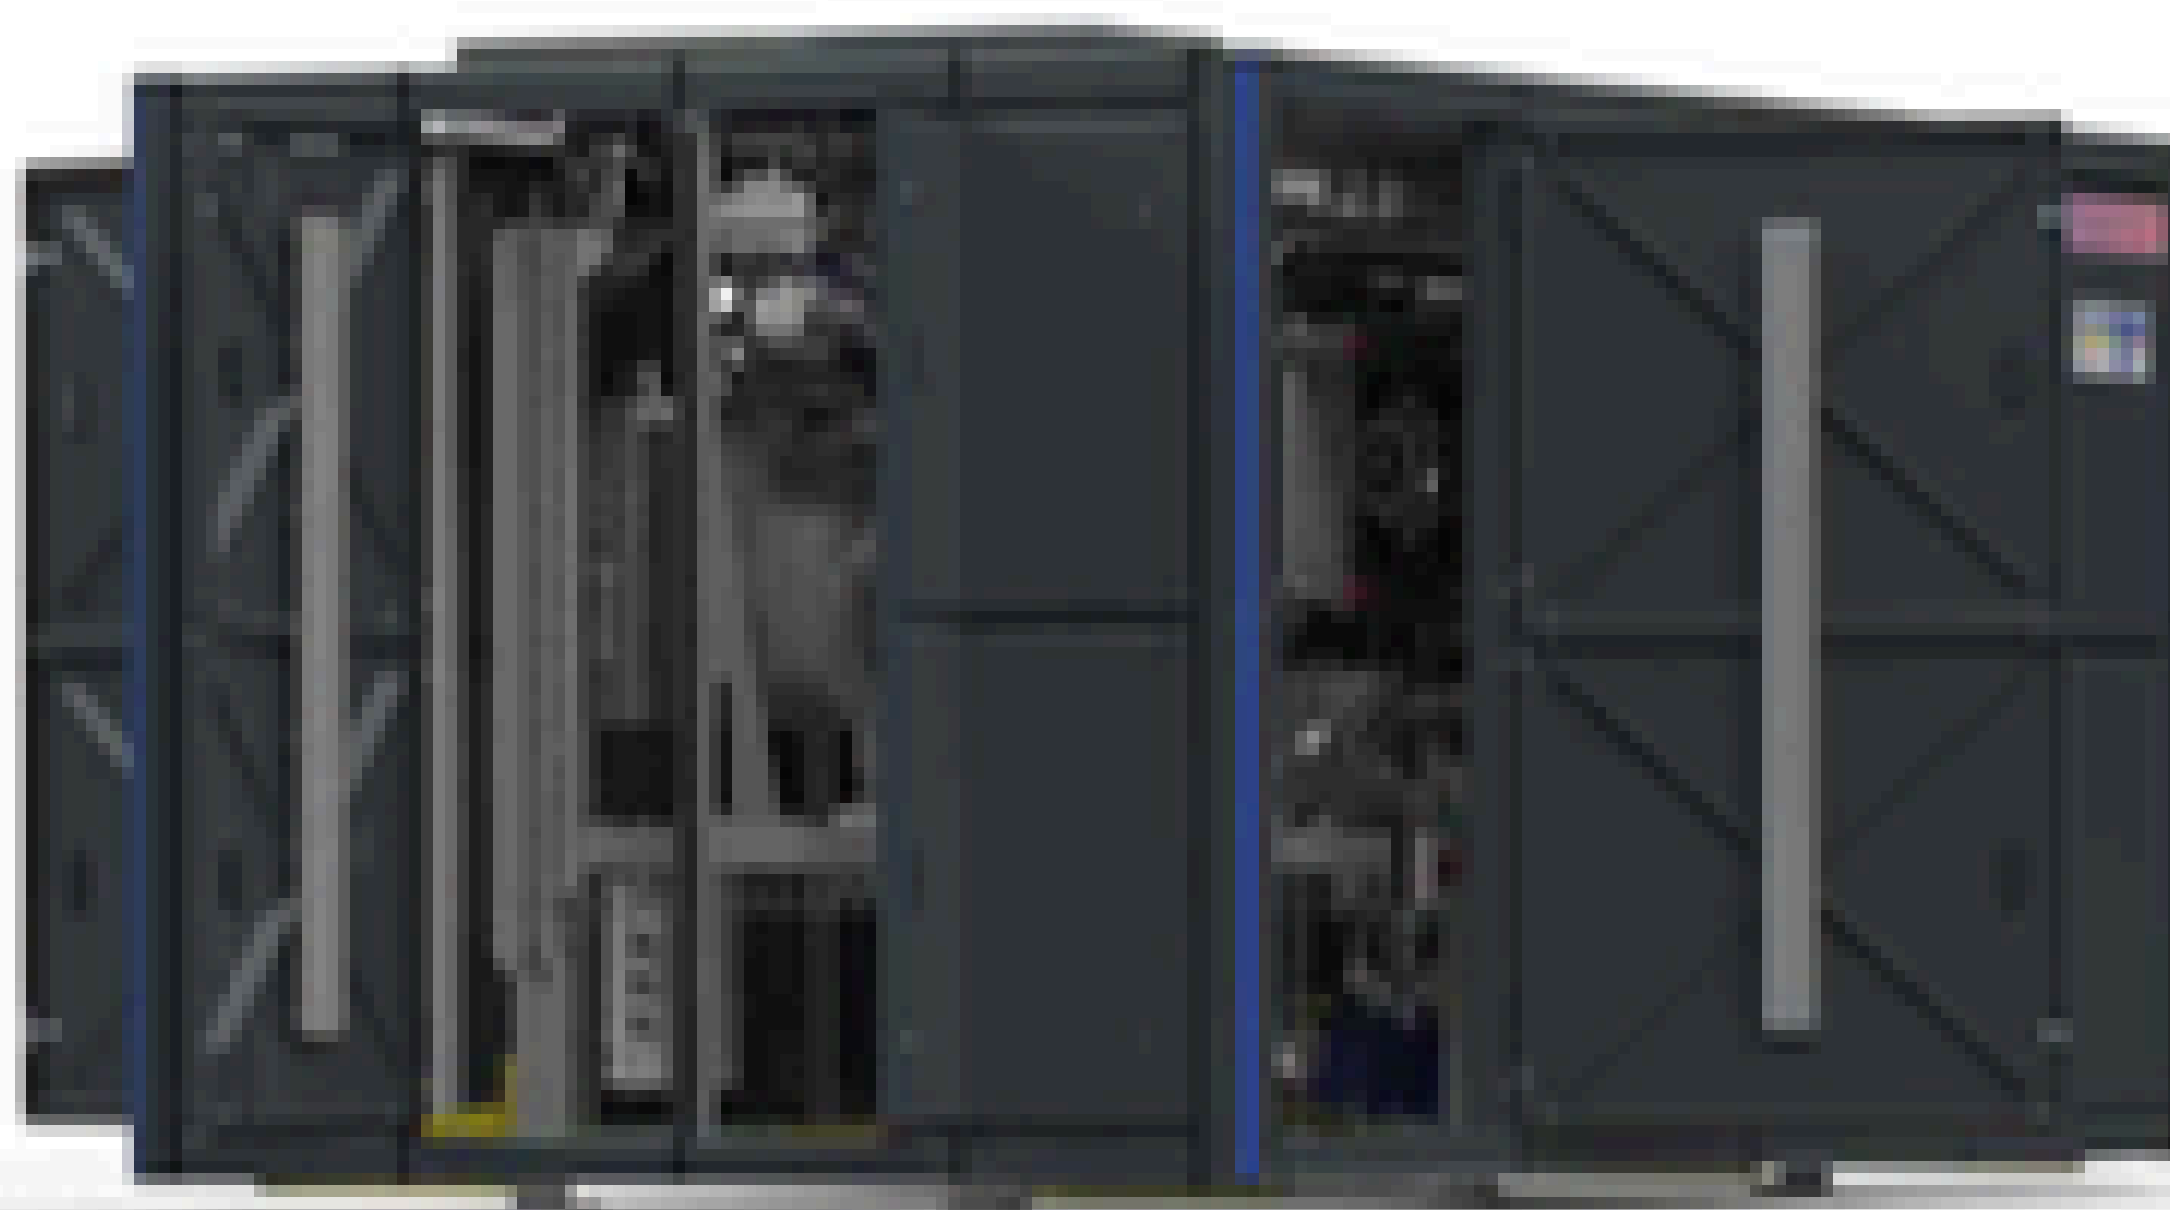

PLAY

INNOVATION AND EFFICIENCY

WHAT BENEFITS DOES IT PROVIDE?

COLORJET 20 is a revolutionary solution that maximizes productivity in ceramic plants, enabling continuous production of up to 20 tons per hour. Its patented design **reduces energy consumption by more than 50%** compared to other traditional solutions, making it **highly efficient and sustainable**. Additionally, it adapts to various materials and production processes, providing the flexibility needed to **meet market demands**.

COLORJET 20 ensures a completely homogeneous mix, **enhancing both the colour range and intensity** of the product, resulting in innovative, high-quality products. Equipped with advanced controls, it offers **precise control** over the mixing process, guaranteeing consistent results.

Furthermore, its easy maintenance is ensured by the **absence of mechanical elements**, significantly reducing the risks of failures and breakdowns, thus minimizing downtime and facilitating quick repairs through preventive and predictive maintenance.
